

BAUA* workshop: detailed task

12.-13.10.2024

Tallinn, Estonia

1. **Propose a vision**, which could work as an input for future design, planning and decision making for the area;

2. Choose a part of the vision that could be **prototyped as a tactical urbanism** intervention/object/installation;

2. **Find a balanced spatial solution for the area**. The proposal addresses the functioning of the area as a complete, attractive, accessible public space, where all user groups are considered (including a reasonable amount of stopping places to serve businesses in the Pärnu mnt area, which turned out to be a controversial topic within the Main Street project). [Link to the project](#).

3. **Connect the hill with the surrounding** streetscape and mediate the current height differences (increasing accessibility);

4. Find a balance between the **historical values** of the place and the contemporary needs.
